

Sky Muster™ Satellite connections made easy

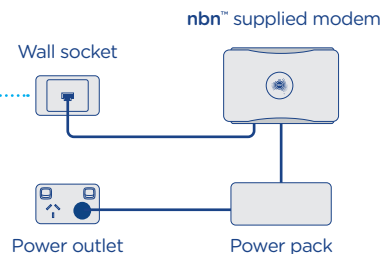

What is a Sky Muster™ Satellite connection?

- A Sky Muster™ connection is used for connecting some remote and rural locations to the **nbn**™ network.
- A satellite dish is installed on the premises and receives the **nbn**™ network signal from the Sky Muster™ satellite.

What equipment will you need?

- Connection includes the installation of an **nbn**™ Sky Muster™ satellite dish outside your premises, power pack and an **nbn**™ supplied modem installed indoors.
- You should check with your internet provider whether you require additional equipment such as a router to access the internet.
- **nbn** doesn't currently charge you for a standard Sky Muster™ satellite installation.
- Ask your internet provider if there are any additional fees.

How to connect

- Order a plan over the **nbn**™ network from a Sky Muster™ provider. For a list of providers visit nbn.com.au/skymuster
- An **nbn**™ installer will contact you to arrange a connection date.
- Someone over the age of 18 needs to be home on the day of your connection.

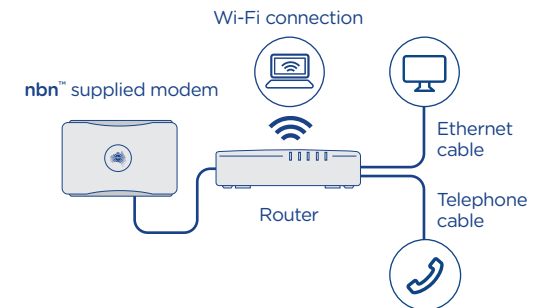

*Note: **nbn** is a wholesaler. This means you can't purchase your phone or internet from **nbn**.*

What happens after installation?

- Once active, connect to the **nbn**™ network using your provider's router and the instructions supplied by your provider.
- If required, connect your home phone and other devices to your router.

Note: Connecting to Sky Muster™ does not impact your copper landline phone service.

What if you have problems after connecting?

Contact your internet provider
